RESEARCH AREA OF INTEREST

Primary: Machine Learning for Predictive Product Design & Intelligent IoT Systems

Secondary: AI-driven Decision Support Systems, Data Analytics, Automated Safety Systems

EDUCATION

Bachelor of Technology (B.Tech) – Computer Science and Engineering 2023–2027

MIT Vishwaprayag University, Solapur

Current CGPA: **7.9 / 10** (6th Semester)

Certified in the Top 20% of the batch for academic excellence

Expected Graduation: June 2027

Class XII (HSC) – Walchand College of Arts and Science **58%**

Class X (SSC) – B.F. Damani Vidya Mandir, Solapur **86%**

GOAL-ORIENTED PRODUCT DEVELOPMENT & RESEARCH

AI-Enabled Visa Status Prediction System (Decision Support Product)

- Developed a predictive system to estimate visa approval probability and processing duration using classification algorithms.
- Engineered a scalable backend model for real-world decision-support automation.
- Applied validation techniques to ensure model reliability for workflow integration.

Healthy Lifestyle Prediction Product

- Developed a supervised ML-based health predictor using Logistic Regression, Random Forest, and SVM.
- Optimized performance through EDA and feature engineering, achieving high precision and recall.
- **Outcome:** Designed a conceptual framework for a personal health monitoring dashboard.

Smart Plant Monitoring System (IoT Prototype)

- Engineered an end-to-end IoT product for real-time soil moisture and temperature monitoring.
- Integrated sensors with microcontrollers and built an automated alert system using Arduino IDE.
- Focused on affordable agricultural technology design.

Stock Market EDA Tool

- Built a statistical analysis tool to evaluate volatility, rolling averages, and stock correlations.
- Visualized datasets using Matplotlib and Seaborn to extract financial insights.

TECHNICAL SKILLS

Languages/Core: Python (Pandas, NumPy, Scikit-learn), C++, Java, Data Structures, DBMS

Specializations: Supervised Learning, Predictive Modeling, Exploratory Data Analysis (EDA)

Design & IoT: Arduino IDE, System Architecture, Sensor Integration, IoT Prototyping

Tools: Git/GitHub, Jupyter Notebook, VS Code, LaTeX

COMPETITIONS & RECOGNITION

Hackathon Participant – SVERI College of Engineering, Pandharpur

- Proposed and designed an **AI-integrated Smart Gas Stove** for gas leakage detection.
- Created system architecture merging IoT sensors with alert-based safety automation.

Certifications:

- Machine Learning / Data Science – Coursera
- Technology Certification – Infosys Springboard
